Profile

I am a web enthusiast who can help your lovely team to break challenges and reduce the curtails through exploring and creating new technologies in the space.

Skills

HTML | CSS

Javascript | Typescript (Concurrency, Multithreading, ...)

ReactJS (Hooks, State management, Performance, Concurrent rendering)

NodeJS (Non-blocking code, Concurrent code)

Testing (TDD, E2E, ...)

Teams

Poimandres,
Jotai, Valtio and Zustand

Vitest-dev, *Vitest and Tinyspy*

Vikejs, *Telefunc and Vike*

Non-Open source Experience

Gigmade
Helping with more performant React components, Refactoring the codebases and using better state management structures

BoraBora
Creating products around React three fiber and ThreeJS

Seritaa
Having a smaller codebase, moving from old Nextjs versions to Next 11 with using modern features like `getServerSideProps`

Fiction
Discovering a new pattern for Typescript-GraphQL oriented apps and using DB models along each of every query/mutation groups

Projects

Jotai
Primitive and flexible atomic state management for React with more than **1,000,000** downloads on npm! It's the **3rd** project on **Javascript rising list**.

Vitest
A Vite-native test framework. It's the **8th** project on the **Javascript rising list**! With more than **2000** starts in the first week of release!

Valtio
Valtio makes proxy-state simple for React and Vanilla javascript. With more than **300,000** downloads in npm

Vitext
The **NextJS** like React framework for better User & Developer experience using NodeJS. You can have your website running in under **1 second**

Tinyspy
A **minimal** library for spying in testing, with no dependencies, used in **Vitest**'s core

Tinypool
A minimal and tiny Node.js Worker Thread Pool implementation, a fork of piscina, with fewer features, smaller size (**38KB**), better memory consumption for relying on physical cores instead of logical cores, used in **Vitest**'s core

Telefunc
Remote Functions. Instead of API. for any bundler/framework that can be used in NodeJS, like vite, next and nuxt
It's the library where you can have your **front end** and **back end** in the **same place**

Vite-plugin-cloudflare
Building **Cloudflare workers** is faster and easier using vite-plugin-cloudflare with **node builtins** like process and stream
